## Project Design Phase-II Technology Stack (Architecture & Stack)

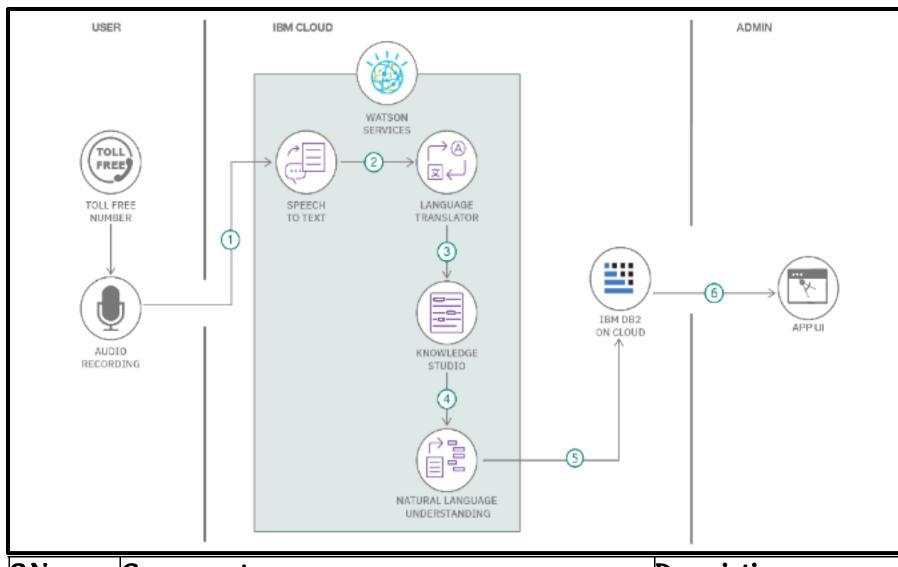

Date	23rd May 3035
Team ID	LTVIP2025TMID56664
Project Name	BookNest
Maximum Marks	4 Marks

## **Technical Architecture:**

The Deliverable shall include the architectural diagram as below and the information as per the table 1 & table 2

Example: Order processing during pandemics for offline mode

Reference: <a href="https://developer.ibm.com/patterns/ai-powered-backend-system-for-order-processing-during-pandemics/">https://developer.ibm.com/patterns/ai-powered-backend-system-for-order-processing-during-pandemics/</a>

## Guidelines:

Include all the processes (As an application logic / Technology Block)

Provide infrastructural demarcation (Local / Cloud) Indicate external interfaces (third party API's etc.) Indicate Data Storage components / services Indicate interface to machine learning models (if applicable)

S.No	Component	Description	Technology
	User Interface	How user interacts with application Web UI	HTML, CSS,ReactJS+Vite/Bootstrap, CSS etc.
	Application Logic-1	Logic for a process in the application	JavaScript.

Database	Database Data Type, Configurations etc.	
File Storage	File storage requirements	MongoDB Cluster storage.
External API-1	Purpose of External API used in the application	
External API-2	Purpose of External API used in the application	

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
	Open-Source Frameworks	Frontend uses React (via Vite), Tailwind CSS, Bootstra for UI components, Axios for HTTP requests. Backend built using Node.js with Express.	• 1
	isbcrypt, CORS, express-validator, Helmet ut(optional)		
	Scalable Architecture	validations prevent injection attacks.  Follows a modular architecture separating frontendous backend, and database (3-tier). Can be containerized using Docker for scaling.	· • · · · · · · · · · · · · · · · · · ·
	Availability	Application can be deployed on cloud platforms (e.g. Heroku, Render, AWS) with horizontal scaling. Loabalancers can be used if demand increases.	•
	Performance	Efficient API calls with Axios, caching static content usin CDN. MongoDB handles high-volume reads/write efficiently.
